

*Frontiers in Earth Science* and *Frontiers in Environmental Science* are yet to receive an Impact Factor, but we are in regular contact with Clarivate Analytics who produce the Journal Citation Reports from which the Impact Factor is calculated. Please be assured that we are doing our utmost to get this as soon as possible, but the ultimate decision is dependent on Clarivate Analytics and we therefore cannot guarantee a date. *Frontiers in Earth Science* is indexed in the Emerging Sources Citation Index which means articles are discoverable on the Web of Science. The Journal is also indexed in Scopus with a 2017 CiteScore of 2.66. *Frontiers in Environmental Science* is now indexed in Scopus (CiteScore 3.75) and will shortly be under consideration for inclusion in the Emerging Sources Citation Index.

At the same time, we also wish to champion the value of every paper that is published with our journals, which we do so through the live Article Impact metrics that are calculated for each paper. These not only count Page Views and Downloads but also break these down into month-by-month interest, as well as highlighting cultural demographics - who's viewing your paper, and where. We have also now included AltMetrics, which identify an article's presence on various medias.
